

# Econ 3334 Introduction to Econometrics L1 & L2 (4 Credits)

Department of Economics, HKUST

Fall 2021

All the content provided in this syllabus is subject to further updates depending on the pandemic situation in Hong Kong and the development of social distancing policy of the Hong Kong government.

**Instructor:** FENG, Junlong

**Email:** [jlfeng@ust.hk](mailto:jlfeng@ust.hk)

**Office:** Room 6073, LSK

**Tel:** +852-23587616

**Office Hours:** Wed 10 am-11 am (or by appointment)

**Class Hour and Venue:** Tue & Thu 10:30 am-11:50 am, Rm 5583, Lift 29-30 (L1)

Tue & Thu 04:30 pm-05:50 pm, Rm 6591, Lift 31-32 (L2)

**TA:** TBA

**Tutorials:** Tu 12:30 pm-01:20 pm, Rm 4502, Lift 25-26 (L1)

Th 06:00 pm-06:50 pm, Rm 6591, Lift 31-32 (L2)

---

## Course Description

This course introduces students to basic econometric techniques and their applications in empirical economic analysis. The course begins with a review of probability and mathematical statistics, and focuses on linear regression models with one regressor and multiple regressors. Basic theory of estimation and inference will be introduced, with an emphasis on practical issues in econometric analysis of cross-sectional data. R will be used for computer-based calculations.

## Course Intended Learning Outcomes (Course ILO)

Upon completion of the course, you will be able to:

1. Understand the key assumptions used in regression models, and explain the relationship between those assumptions and properties of estimators.
2. Use regression for basic economic data analysis, conduct statistical inference, and interpret the results.
3. Use the software R to conduct econometric analysis.
4. Collect data to conduct your desired empirical analysis, and provide answers to economic questions.

5. Present your understandings of certain economic problems, and use empirical results to justify your explanation.

## Prerequisites

Basic statistics or consent of instructor.

## Course Materials

- **Textbook.** Stock, James and Mark Watson. *Introduction to Econometrics* (4th edition), Pearson. We will also use materials from the companion website: [https://media.pearsoncmg.com/intl/ge/2019/cws/ge\\_stock\\_econometrics\\_4/](https://media.pearsoncmg.com/intl/ge/2019/cws/ge_stock_econometrics_4/).
  - I reserved a few copies in the library. Ebook is also available from the library's website, although it only allows four concurrent users to access.
  - Some problem sets are from the required textbook. You may use its previous editions, **but you are responsible to make sure that your solutions are based on the 4th edition.**
- **Slides, problem sets, and other materials.** All these course related materials will be posted on Canvas (<http://canvas.ust.hk>). You should check Canvas at least twice per week for announcements and postings.

## Computer Packages

- R will be used to apply the econometric tools to data. R is both a programming language and a software environment for statistical computing, which is free and open-source. To get started, you will need to install two pieces of software:
  1. R: <https://www.r-project.org/>.
  2. RStudio: <https://rstudio.com/>. You have to install R first. RStudio is only an interface making it easier for you to interact with R.
- You may use other software/packages (Stata, MATLAB, Python, Julia, etc.). But they will not be taught in class.

## Teaching and Learning Activities

### Lectures

- Following the current university's guidelines, the default teaching mode is **in-person on campus**. If every enrolled students in a section are physically in Hong Kong, no live Zoom session will be offered for remote attendance. If at least one student does not physically stay in Hong Kong after the add-drop period because of travel restrictions, live Zoom sessions will be offered in **mixed-mode lite**, which features limited interactions with students

attending online. This is subject to change if the University changes its policies during the semester.

- Please make sure to attend all lectures. Not all the topics in the textbook will be covered, and the ones I cover in the lectures will be the focuses of the exams. I will post slides before the lectures on Canvas.

## Tutorials

The TA will discuss problem sets in the tutorials. Tutorial sessions are NOT weekly. The TA will make an announcement via Canvas before each session. No tutorial sessions in the first week.

## Assessment

### Problem Sets (20%)

- There will be four to five problem sets during the semester. **If there are five, the lowest grade will be dropped. If there are four, all of them count.** Each counted problem set shares a weight of 5% towards the final grade. The problem sets will involve both theoretical and empirical work. You may discuss the questions and work in groups, **but you must submit your own solutions.**
- The problem sets will be posted in Canvas. You have to submit your solutions through **Canvas** by the due date and time. **Submissions by emails or to the department mailboxes will NOT be accepted. Only PDF/JPG/JPEG/HEIC files will be allowed.**

### Midterm (30%)

- **Date and time (tentative): Oct. 22 (Friday), 7:30 pm.**

### Final (50%)

- Date and time: TBA.
- The final will be cumulative, covering all the course materials including those covered by the midterm.

### Policies on Exams and Problem Set Submission

- Proctored midterm and final exams will be held **on campus** for all students, except those who cannot be in Hong Kong. For those students, we will have a simultaneous online exam with Zoom proctoring with the same set of questions. More details will be announced before the exam.
- There will be no make-up exam for the midterm. If you miss the midterm, you will receive a zero. The only exception is a verifiable medical reason, in which case the weight of the midterm will be moved to the final exam. If you miss the final, you will receive an "F" (fail) for the course. The only exception is that you apply for a make-up exam and get approved

by the University ([https://arr.ust.hk/reg/em/em\\_std\\_reg/reg\\_makeup.html](https://arr.ust.hk/reg/em/em_std_reg/reg_makeup.html)). Only in that case a make-up final would be arranged.

- There is zero tolerance of cheating. If you are caught cheating, you will receive a zero for the course. The case will be reported to both the department and the school levels.
- Late submission of the problem sets, including uploading failure due to using a different file format other than instructed, will not be accepted unless you have a verifiable medical reason.
- Re-grading must be completed within **one week** from the time the grade of a problem set or an exam is released. Please contact the TA regarding re-grading.

### **Academic Integrity and Honesty**

Students are required to comply with the university policy on academic integrity found <http://ugadmin.ust.hk/integrity/student-1.html>

### **Tentative Schedule**

The schedule is tentative and subject to change as the semester progresses. The chapter numbers refer to the textbook. Read the entire chapters, but focus on the parts covered in the lectures.

#### **Module 1. Introduction (Ch. 1)**

- Classes: Sept. 2 (Thu).

#### **Module 2. Review of Probability (Ch. 2)**

- Classes: Sept. 7 (Tue), Sept. 9 (Thu), Sept. 14 (Tue).

#### **Module 3. Review of Statistics (Ch. 3)**

- Classes: Sept. 16 (Thu), Sept. 21 (Tue), Sept. 23 (Thu).

#### **Module 4. Linear Regression with a Single Regressor: Estimation (Ch. 4)**

- Classes: Sept. 28 (Tue), Sep. 30 (Thu), Oct. 5 (Tue), Oct. 7 (Thu).

#### **Module 5. Linear Regression with a Single Regressor: Inference (Ch. 5)**

- Classes: Oct. 12 (Tue), Oct. 19 (Tue).

#### **Midterm Review**

- Class: Oct. 21 (Thu).

**Midterm Exam**

- **Date and time (tentative): Oct. 22 (Friday), 7:30 pm.**
- Covers Modules 1-5.

**Module 6. Linear Regression with Multiple Regressors: Estimation (Ch. 6)**

- Classes: Oct. 26 (Tue), Oct. 28 (Thu), Nov. 2 (Tue).

**Module 7. Linear Regression with Multiple Regressors: Inference (Ch. 7 & 9)**

- Classes: Nov. 4 (Thu), Nov. 9 (Tue), Nov. 11 (Thu), Nov. 16 (Tue).

**Module 8. Linear Regression with Too Many Regressors: Big Data (Ch. 14)**

- Classes: Nov. 18 (Thu), Nov. 23 (Tue).

**Module 9. Nonlinear Regression Function (Ch. 8)**

- Classes: Nov. 25 (Thu).

**Final Review**

- Class: Nov. 30 (Tue).
